

Medical Procedures

We now offer the most advanced medical services for your cosmetic needs. We understand the importance of working together with our clients in developing an individualized facial and medical procedure plan that achieves balance and harmony in creating a more beautiful and confident you. Individualized treatment plans can be combined into affordable cosmetic service packages.

Dynamic line Reduction

Years of squinting, concentrating, or frowning can cause your skin to furrow and crease. These dynamic lines are commonly referred to as 11's between the brows or crow's-feet around the eyes.

Treatment Options: BOTOX \$12.00 per Unit | DYSPORT \$4.00 per Unit

Facial Fillers

The best way to refresh your appearance is by replenishing the volume your skin has lost. This diminishes wrinkles, resulting in a much more youthful look. Facial fillers address sinking and sagging skin. Dermal fillers can be used in a variety of ways to create a more youthful looking you. Facial fillers correct moderate to severe facial wrinkles and folds, such as smile lines, marionette lines, and loss of volume in cheeks. In addition facial fillers can be used to augment the lips, nose and chin.

Lip Augmentation:

JUVEDERM \$559 per Syringe | RESTYLANE \$550 per Syringe

Chin Augmentation:

RADIESSE \$525 per Syringe

Nonsurgical Rhinoplasty:

PERLANE \$559 per Syringe | RADIESSE \$525 per Syringe

Nonsurgical Facelift:

**PERLANE \$559 per Syringe | RADIESSE \$525 per Syringe
JUVEDERM \$559 per Syringe | RESTYLANE \$550 per Syringe**

Laser Skin Rejuvenation and Hair Reduction

Our state of the art laser system can treat a wide range of common skin concerns for all skin types. This includes pigmentation, sun damage and age spots, skin resurfacing, acne scars, and firming and wrinkle reduction. Our laser is also effective in the removal of spider veins.

Phototherapy

BBL BroadBand Light technology utilizes the power of pulsed light to deliver excellent phototherapy results. By selecting the appropriate wavelength or filter, the physician will be able to treat a broad range of skin conditions caused by skin aging and sun exposure. Its possible to treat any area of the body that has sun damage.

Acne Treatment

Laser therapy is proven to be a very effective and fast way to treat acne. Acne laser therapy works by heating the sebaceous glands in the dermis layer of the skin leading to a reduction of oil production. Repeated treatments lead to a noticeable reduction in active acne in 2-4 weeks. Results can last up to 6 months. A series of 6-8 treatments one week apart is recommended for best results.

Acne Scar Treatment and Resurfacing

Our lasers are the most advanced laser skin resurfacing systems available today. This amazing laser resurfacing technology allows us to dramatically rejuvenate your skin with fewer risks and less down time than the older CO2 laser resurfacing technology.

Skin Firming and Body Contouring

Our laser therapy utilizes infrared energy to deeply heat soft tissue while protecting the entire treated area with sapphire contact cooling. Targeted heating causes soft tissue coagulation that tightens tissue as it heals, stimulating

collagen contraction and remodeling. This process initiates the body's natural healing process and a new foundation of collagen is created, resulting in a firmer, more youthful skin appearance. The full effect of skin firming treatments can be seen over several subsequent months.

Permanent Hair Reduction

Laser or light energy is selectively absorbed by the melanin in the hair. The heat injures the hair follicle. After a series of treatments, most hair is permanently removed. However, if hair does regrow it will be finer and lighter than before.

Vascular Cosmetic Services (Chemical & Laser)

Spider veins are a milder form of varicose veins, whereby you get bluish, reddish veins that look like spider webs or tree branches. They are caused by the slowing down of blood circulation, and are usually found on the face, legs, and thighs.

Laser or light energy is selectively absorbed by the oxyhemoglobin in the vein resulting in heating of the blood vessels. The vascular lesion will break down and shrink which leads to a reduction of the vein. The injection of spider veins (sclerotherapy) is an alternate form of treatment. Spider vein and reticular vein treatment cost is dependent on severity.

Medical Vascular Wellness Services

If you experience the discomfort and swelling of varicose veins, you may be suffering from venous reflux disease. Healthy leg veins contain valves that open and close to assist the return of blood back to the heart. Venous reflux disease develops when the valves that keep blood flowing out of the legs and back to the heart become damaged or diseased. As a result valves will not close properly, leading to symptoms of:

- Varicose veins
- Pain
- Swollen limbs
- Leg heaviness and fatigue
- Skin changes
- Ulcers

The Venous closure procedure is the only minimally invasive segmental radiofrequency (RF) ablation treatment that uses the ClosureFast Endovenous Radiofrequency Ablation (RFA) Catheter to collapse and close enlarged leg veins in patients with varicose veins and Chronic Venous Insufficiency (CVI). Each patient will have a complete vascular workup if they are a candidate for the procedure. Most insurance cover this procedure.
